Experience

Mar 2023 - Present

DevOps Engineer
Noury AG. (Switzerland - Remote)

- **DevOps Engineer (Jul 2025 - Present)**
  - Architected and managed secure cloud infrastructure on GCP using Terraform (IaC), optimizing resource allocation, enforcing security best practices, and reducing monthly cloud costs by 50-60%.
  - Containerized applications with Docker, orchestrating scalable deployments via Kubernetes and Helm to ensure highly available systems.
  - Engineered CI/CD workflows using Bitbucket Pipelines for multiple projects, ensuring short release cycle, fast and reliable deployments.
  - Streamlined version control workflows and local environment setups, significantly enhancing the developer experience and boosting team deployment frequency.
  - Implemented comprehensive observability and monitoring systems, improving incident response times and maintaining service health.
- **Software Developer / DevOps Engineer (Apr 2023 - Jun 2025)**
  - Designed and implemented a robust backend REST API for the Noury consumer mobile app using Django Rest Framework (DRF), ensuring scalable and seamless data integrations.
  - Engineered a custom ERP solution using Frappe/ERPNext, synchronizing multiple third-party data sources and APIs to improve internal operational efficiency.
  - Led the delivery of data pipelines, automated data analysis and AI integrations that provide business insights to the Noury team.
  - Mentored junior engineers and interns on technical best practices, directly accelerating project delivery timelines and fostering professional growth.

Nov 2024 - May 2025

DevOps Engineer
YourStore Systems AG. (Switzerland - Contract)

- Led the backend engineering team to architect a robust API and modular ERP system using Python and Frappe framework with ERPNext for an unattended retail platform service.
- Architected and provisioned scalable GCP infrastructure via Terraform (IaC), orchestrating Docker containers with Kubernetes and Helm.
- Engineered automated CI/CD workflows with GitHub Actions, accelerating feature release cycles and reducing deployment time without compromising reliability.
- Accelerated time-to-market by successfully launching 3 client businesses (unmanned stores) on the new platform within the first 6 months of development.

Nov 2019 - Feb 2023

Software Developer
Freelance (Self-Employed)

- Providing prototyping and software solution services that integrates well with hardware solutions using image processing, desktop application frameworks, SQL databases.

Jun 2021 - Mar 2022

Software & Mechatronics Engineer
Specialist Company for Engineering Solutions. (Alexandria, Egypt)

- Developed desktop applications for an automated warehouse robotic solution that uses machine vision for product picking and sorting, synchronizing with systems to ensure data integrity.
- Designed, implemented and tested prototypes of custom solutions for Building Management Systems, adding extra safety features to the existing systems, including mechanical, electrical and PCB layout designs.

Skills

• Software

Programming Languages: Python, Bash/Shell scripting, Javascript, SQL

DevOps & Cloud Tools: Linux, Git, Docker, Kubernetes, Terraform, Helm, GitHub Actions, Bitbucket Pipelines, GCP, AWS

Development Frameworks: Django, DRF, FastAPI, Flask, Frappe/ERPNext

Markup Languages: Markdown, LaTeX, HTML/CSS.

Projects

Noury Consumer App

- Designed and developed a scalable backend REST API using Django Rest Framework to support Noury's consumer mobile application.
- Optimized CI/CD pipelines and automated deployment processes using Docker for containerization and Kubernetes for orchestration, enhancing release efficiency, scalability, and minimizing downtime.
- Implemented monitoring and logging strategies to maintain API performance and reliability.

Noury Resource Planning

- Engineered a customized ERP system using Frappe/ERPNext, designed to streamline internal operations and enhance business efficiency.
- Implemented advanced data synchronization techniques to integrate multiple third-party data sources and APIs, ensuring real-time updates and accurate information across systems.
- Customized ERP modules and workflows to meet specific business needs, including automated reporting and process automation to improve operational efficiency.
- Optimized system performance and scalability, adapting the ERP solution to support growing business demands and evolving requirements.

Ur-Store Platform

- Led the backend team and contributed to the implementation of an API backend and ERP system for a reliable, modular platform for unattended retail.
- Built a cloud infrastructure on GCP using IaC, CI/CD, containerization and orchestration config for the whole system.
- Launched 3 successful client projects (unmanned stores) on new platform in first 6 months.

Training and Certifications

February 2026
Professional Cloud Architect
Google
`credly.com/badges/7ef1d890-0bdd-4124-b552-d74fefa5ebbb/public_url`

June 2025
Associate Cloud Engineer
Google
`credly.com/badges/515940bf-b2cd-4879-9306-2c6c4f411098/public_url`

April 2023
Agile Explorer
IBM
`credly.com/badges/7b1b3f1f-edc3-4ffd-9328-7c55b4078b57/public_url`

March 2023
Thinking and Creating with Code
EPFL Extension School
`learn.extensionschool.ch/verify/VqOzbOAyD9pl`

September 2022
CS50x
Harvard University
`certificates.cs50.io/fe015e39-3d8e-48ad-a13b-4177ec41e108.pdf`

July 2021
CSWE: Certified SolidWorks Expert - Mechanical Design.
Dassault Systèmes
C-6NMDPAQ9UE

Education

2016 - 2021
B.S.E. in Agricultural Engineering
Faculty of Agriculture, Alexandria University
